# Move2Origin.lsp

Moves all the cad based on a point the user selects to the coords 0,0,0.

How to load the script into Autocad
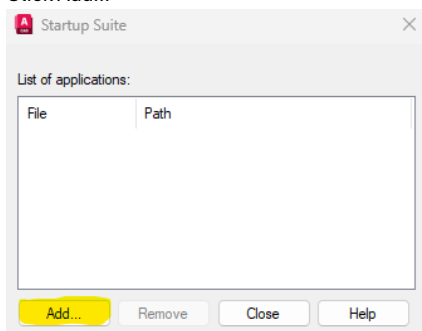

1. Open AutoCAD.

2. Type APPLOAD in the command line and press Enter.

3. In the next menu start up suite area. Click Contents.

4. Click Add...

    and add the TidyUp.lsp file.
    Located in R:\acad\AutoCAD Scripts

5. If security pop up appears. click "Always Load"

6. Once added close the load/unload application menu.

7. Now whenever you open autocad. To Run the Script. Type "MOVE2ORIGIN" in the command line and press Enter.

This script will;

Step 1: Prompt user to pick a point.

Step 2: Select all geometry

Step 3: Move everything so the user selected point is placed on coordinates 0,0,0

NOTE
User will still have to check;

- DWG will still need to be tidied before bringing into revit. Recommend use of TidyUp.lsp.
- Typically only use this on DWGs when co-ordinates isn't a concern. Eg for dwgs of details to bring into detail families.
